CSP - FOOD ADULTERATION

Food adulteration refers to the alteration of food quality that takes place deliberately. It includes the addition of ingredients to modify different properties of food products for economic advantage. Color, appearance, taste, weight, volume, and shelf life are such food properties. Substitution of food or its nutritional content is also accomplished to spark the apparent quality. Substitution with species, protein content, fat content, or plant ingredients are major forms of food substitution. Origin misrepresentation of food is often practiced to increase the market demand of food. Organic and synthetic compounds are added to ensure a rapid effect on the human body. Adulterated food products are responsible for mild to severe health impacts as well as financial damage. Diarrhea, nausea, allergic reaction, diabetes, cardiovascular disease, etc., are frequently observed illnesses upon consumption of adulterated food. Some adulterants have shown carcinogenic, clastogenic, and geotaxis properties. This review article discusses different forms of food adulteration. The health impacts also have been documented in brief.

Certificate from Official of the Community

This is to certify that Chintoch Singhania (Name of the Community Service Volunteer) Reg. No. 321128505012 of Chaitanya (Name of the College) underwent community service in Ch Gajuwaka (Name of the Community) from 12-01-2023 to 26-02-2023. The overall performance of the Community Service Volunteer during his/her community service is found to be Satisfactory (Satisfactory/Good).

CSP - ACCESS TO SAFE DRINKING WATER

This is the project tells about “Access to safe drinking water”. Water, a substance composed of the chemical elements hydrogen and oxygen and existing in gaseous, liquid, and solid states. It is one of the most painful and essential of compounds. It is a less and odourless liquid at room temperature, it has the important ability to dissolve many other substances

CSP - RENEWABLE ENERGY

Renewable is not only the need of the hour, but also the talk of the town. And Engineering students are opting for the green when it comes to their B.E./B.Tech project. So, we thought of compiling a list of project ideas based on Renewable energy. Students belonging to third year or final year can use these projects as mini-projects as well as mega-projects.

This list has been compiled after referring to the project ideas that have come across the forum since last few years and searching across the web.

ORGANIC FARMING

Organic farming can be defined as an agricultural process that uses biological fertilizers and pest control acquired from animal or plant waste. Organic farming was initiated as an answer to the environmental sufferings caused by the usage of chemical pesticides and synthetic fertilizers. It helps us to restore, maintain and enhance the ecological balance.

CHEMICALS USED IN FRUITS AND VEGETABLES

Most of the fruits and vegetables that you eat are loaded with chemicals and pesticides. These are primarily used by the farmers during the cultivation to save the fruits and vegetables from pests and harmful insects. However, the residue pesticides and chemicals stay on the surface of the fruits & Vegetables. Rinsing with plain water doesn't remove the harmful effects of pesticides on fruits and vegetables

Plant diseases

Plant pathology (also phyto pathology) is the scientific study of diseases in plants caused by pathogens (infectious organisms) and environmental conditions (physiological factors). Organisms that cause infectious disease include fungi, oomycetes, bacteria, viruses, viroids, virus-like organisms, phyto plasmas, protozoa, nematodes and parasitic plants Not included are ectoparasites like insects, mites, vertebrate, or other pests that affect plant health by eating plant tissues. Plant pathology also involves the study of pathogen identification, disease etiology, disease cycles, economic impact, plant disease epidemiology, plant disease resistance, how plant diseases affect humans and animals, patho system genetics, and management of plant diseases.

PROJECT : 1 DAIRY PRODUCTS

Dairy products or milk products, also known as lacticinia, are food products made from (or containing) milk. The most common dairy animals are cow, water buffalo, nanny goat, and ewe. Dairy products include common grocery store food items in the Western world such as yogurt, cheese, milk and butter. A facility that produces dairy products is known as a dairy. Dairy products are consumed worldwide to varying degrees (see consumption patterns worldwide). Some people avoid some or all dairy products either because of lactose intolerance, veganism, or other health reasons or beliefs.

Certificate from Official of the Community

This is to certify that Shri Kaultha Foni (Name of the Community Service Volunteer) Reg. No. 121128504019 of Chadanga district (Name of the College) underwent community service in Dairy products (Name of the Community) from 25/10/22 to 01/12/22. The overall performance of the Community Service Volunteer during his/her community service is found to be Good (Satisfactory/Good).

CSP- PRIVATE TRANSPORT

Private transport (as opposed to public transport) is the personal or individual use of transportation which are not available for use by the general public. Compared to public transport, typically the user faces fewer constraints on time and route of transit ('choice rider' vs. 'captive rider'). In some cases, public transportation systems are hardened to extreme weather conditions to a level difficult to achieve with private transport: a green water or blue water public ferry service can continue to operate in blustery maritime conditions unsuitable for the vast majority of private watercraft. Additionally, public transport is often safer than private transport, because the drivers and pilots in most modes public transport are professional trained and certified, with deep organizational

CSP- BANKING SERVICES

Banking is an industry that handles cash, credit, and other financial transactions. Banks provide a Safe place to Store extra cash and credit. They offer savings accounts, Certificates of Deposit, and checking accounts. Banks use these deposits to make loans.
